Attachments: RE Initial comments on Expera Thilmany Mill--Kaukauna.msg
Expera Kaukauna 2015Modeling.zip

Good afternoon Sarah.....

Attached you will find information and files that we believe are responsive to items 8, 10 and 11a. of the information request to Expera Kaukauna. Also noted in the first attachment, the information requested in item 11.a. was provided to Mary Portanova when the SO2 modeling was conducted under the DRR.

Please forward this information to the appropriate staff and let us know if it fulfills your request.

Thanks.

Michelle

Michelle, the available information is attached. Please note that Expera (Mark Nessman) was provided with the SO2 modeling information submitted to USEPA in support of the monitoring in response to the SO2 Data Requirements Rule. I have copied both the transmittal email to Mr. Nessman and the transmittal email to USEPA. Also attached is a renamed zip file containing the information used in the construction permit 14-DMM-191 concerning particulate matter that supported Expera's boiler MACT requirements. Prior analyses were completed in January 2010 and December 2007 but this information is not attached.

Also, note that I copied several additional people on this message because I am unsure how this is being tracked via the ORR system.

Subject: Modeling files for Expera Kaukauna - 445031180

Hi John,

Expera Thilmany received a very detailed information request from U.S. EPA last month. We agreed to assist Thilmany with providing information to U.S. EPA that we have available in electronic form. I was chatting with Mark Nessman from the facility earlier today, and a portion of the request is for modeling files that he is sure that you have since modeling was conducted recently for Carol's permit renewal and a couple of construction permits. Mark is hoping you can provide those documents and/or files..... Here is exactly what EPA is looking for:

If air dispersion modeling has previously been conducted for the Facility, include the following information:

- *Input and output files for all modeling software (including pre- and post processors);*
- *Version number for any modeling software used;*
- *Meteorological data used, including years and station location for all surface data (!-minute and hourly, if applicable) and upper air data; and*
- *Modeling report or text file describing the modeling methodology and input data.*

Provide the following information pertaining to the Facility:

- *Building dimensions for all buildings located on the Facility property: length, width, and height (specify units), as well as the dimensions for each tier of any multi-leveled (tiered) buildings;*
- *Geographic coordinates (Universal Transverse Mercator (UTM) coordinates or latitude and longitude) of each building corner and coordinates of all corners of each tier of any multi-leveled (tiered) building. Specify the datum used (e.g., NAD83, NAD27, WGS84, etc.);*
- *Property boundary coordinates (UTM coordinates or latitude and longitude); and*
- *Location of any fencing or other barriers surrounding the Facility and the locations of any nearby residents*

Provide a list of all emission sources that emit SO₂ at the Facility, broken down as follows:

- *For all point sources (stacks), provide the following (specify units)*
 - *Stack height;*
 - *Stack inside diameter;*
 - *Stack effluent temperature;*
 - *Stack exit velocity (identify if stack is obstructed (e.g. rain cap or has a horizontal or downward release); and*
 - *Geographic coordinates (UTM coordinates or latitude and longitude) of each stack. Specify the datum used (e.g., NAD83, NAD27, WGS84, etc.)*

I'd like to be the point contact, so if you could send me what you have for the above info, that would be great. I can then forward it to EPA. If at all possible to get it by the end of the week, that would be even greater!!!!

Thanks John.....if you have any questions, let me know.

Michelle
